Assignment 4: Data Wrangling (Fall 2024)

Becca Cox

OVERVIEW

This exercise accompanies the lessons in Environmental Data Analytics on Data Wrangling

Directions

- 1. Rename this file <FirstLast>_A04_DataWrangling.Rmd (replacing <FirstLast> with your first and last name).
- 2. Change "Student Name" on line 3 (above) with your name.
- 3. Work through the steps, **creating code and output** that fulfill each instruction.
- 4. Be sure to **answer the questions** in this assignment document.
- 5. When you have completed the assignment, **Knit** the text and code into a single PDF file.
- 6. Ensure that code in code chunks does not extend off the page in the PDF.

Set up your session

- 1a. Load the tidyverse, lubridate, and here packages into your session.
- 1b. Check your working directory.
- 1c. Read in all four raw data files associated with the EPA Air dataset, being sure to set string columns to be read in a factors. See the README file for the EPA air datasets for more information (especially if you have not worked with air quality data previously).
 - 2. Add the appropriate code to reveal the dimensions of the four datasets.

```
#1a

#install.packages("tidyverse")
library(tidyverse)
#install.packages("lubridate")
library(lubridate)
#install.packages("here")
library(here)

#1b
getwd()
```

[1] "/home/guest/EDE_Fall2024/EDE_Fall2024"

```
#1c
EPAair_03_NC2018_raw <- read.csv(</pre>
  file=("Data/Raw/EPAair_03_NC2018_raw.csv"),
  stringsAsFactors = TRUE
EPAair_03_NC2019_raw <- read.csv(</pre>
  file=("Data/Raw/EPAair_03_NC2019_raw.csv"),
  stringsAsFactors = TRUE
EPAair_PM25_NC2018_raw <- read.csv(</pre>
  file=("Data/Raw/EPAair_PM25_NC2018_raw.csv"),
  stringsAsFactors = TRUE
)
EPAair_PM25_NC2019_raw <- read.csv(</pre>
  file=("Data/Raw/EPAair_PM25_NC2019_raw.csv"),
  stringsAsFactors = TRUE
)

## [1] 8581
               20
```

All four datasets should have the same number of columns but unique record counts (rows). Do your datasets follow this pattern?

Yes

Wrangle individual datasets to create processed files.

- 3. Change the Date columns to be date objects.
- 4. Select the following columns: Date, DAILY_AQI_VALUE, Site.Name, AQS_PARAMETER_DESC, COUNTY, SITE_LATITUDE, SITE_LONGITUDE

- 5. For the PM2.5 datasets, fill all cells in AQS_PARAMETER_DESC with "PM2.5" (all cells in this column should be identical).
- 6. Save all four processed datasets in the Processed folder. Use the same file names as the raw files but replace "raw" with "processed".

```
#3
EPAair_03_NC2018_raw$Date <- mdy(EPAair_03_NC2018_raw$Date)</pre>
class(EPAair_03_NC2018_raw$Date)
## [1] "Date"
EPAair_03_NC2019_raw$Date <- mdy(EPAair_03_NC2019_raw$Date)</pre>
class(EPAair_03_NC2019_raw$Date)
## [1] "Date"
EPAair_PM25_NC2018_raw$Date <- mdy(EPAair_PM25_NC2018_raw$Date)
class(EPAair_PM25_NC2018_raw$Date)
## [1] "Date"
EPAair PM25 NC2019 raw$Date <- mdy(EPAair PM25 NC2019 raw$Date)
class(EPAair PM25 NC2019 raw$Date)
## [1] "Date"
#install.packages("dplyr")
library(dplyr)
EPAair_03_NC2018_raw.select <- select(EPAair_03_NC2018_raw, Date, DAILY_AQI_VALUE,
          Site.Name, AQS_PARAMETER_DESC, COUNTY, SITE_LATITUDE, SITE_LONGITUDE)
colnames(EPAair 03 NC2018 raw.select)
## [1] "Date"
                            "DAILY_AQI_VALUE"
                                                  "Site.Name"
## [4] "AQS PARAMETER DESC" "COUNTY"
                                                  "SITE LATITUDE"
## [7] "SITE_LONGITUDE"
EPAair 03 NC2019 raw.select <- select(EPAair 03 NC2019 raw, Date, DAILY AQI VALUE,
          Site.Name, AQS_PARAMETER_DESC, COUNTY, SITE_LATITUDE, SITE_LONGITUDE)
EPAair_PM25_NC2018_raw.select <- select(EPAair_PM25_NC2018_raw, Date, DAILY_AQI_VALUE,
          Site.Name, AQS_PARAMETER_DESC, COUNTY, SITE_LATITUDE, SITE_LONGITUDE)
EPAair_PM25_NC2019_raw.select <- select(EPAair_PM25_NC2019_raw, Date, DAILY_AQI_VALUE,
          Site.Name, AQS PARAMETER DESC, COUNTY, SITE LATITUDE, SITE LONGITUDE)
```

Combine datasets

- 7. Combine the four datasets with rbind. Make sure your column names are identical prior to running this code.
- 8. Wrangle your new dataset with a pipe function (%>%) so that it fills the following conditions:
- Include only sites that the four data frames have in common:

```
"Linville Falls", "Durham Armory", "Leggett", "Hattie Avenue", "Clemmons Middle", "Mendenhall School", "Frying Pan Mountain", "West Johnston Co.", "Garinger High School", "Castle Hayne", "Pitt Agri. Center", "Bryson City", "Millbrook School"
```

(the function intersect can figure out common factor levels - but it will include sites with missing site information, which you don't want...)

- Some sites have multiple measurements per day. Use the split-apply-combine strategy to generate daily means: group by date, site name, AQS parameter, and county. Take the mean of the AQI value, latitude, and longitude.
- Add columns for "Month" and "Year" by parsing your "Date" column (hint: lubridate package)
- Hint: the dimensions of this dataset should be $14,752 \times 9$.
- 9. Spread your datasets such that AQI values for ozone and PM2.5 are in separate columns. Each location on a specific date should now occupy only one row.
- 10. Call up the dimensions of your new tidy dataset.
- 11. Save your processed dataset with the following file name: "EPAair O3 PM25 NC1819 Processed.csv"

```
EPAair rbind <- rbind(EPAair 03 NC2018 raw.select, EPAair 03 NC2019 raw.select,
                EPAair PM25 NC2018 raw.select, EPAair PM25 NC2019 raw.select)
#8
EPAair_rbind$Date <- ymd(EPAair_rbind$Date)</pre>
EPAair_rbind_wrangled <- EPAair_rbind %>%
  filter(Site.Name == "Linville Falls" | Site.Name == "Durham Armory" | Site.Name == "Leggett"|
   Site.Name == "Hattie Avenue" | Site.Name == "Clemmons Middle" | Site.Name == "Mendenhall School" |
      Site.Name == "Frying Pan Mountain" | Site.Name == "West Johnston Co." |
      Site.Name == "Garinger High School" | Site.Name == "Castle Hayne" |
      Site.Name == "Pitt Agri. Center" | Site.Name == "Bryson City" |
      Site.Name == "Millbrook School") %>%
  group_by(Date, Site.Name, AQS_PARAMETER_DESC, COUNTY) %>%
  summarise(meanAQI = mean(DAILY_AQI_VALUE),
            meanlat = mean(SITE_LATITUDE),
            meanlong = mean(SITE_LONGITUDE)) %>%
  separate(Date, c("Year", "Month", "Day"), sep = "-", remove = TRUE)
## 'summarise()' has grouped output by 'Date', 'Site.Name', 'AQS_PARAMETER_DESC'.
## You can override using the '.groups' argument.

      id_cols = Year:meanlong)
colnames(EPAair_rbind_wrangled.wider)
## [1] "Year"
                    "Month"
                                "Dav"
                                             "Site.Name" "COUNTY"
                                                                     "meanAQI"
## [7] "meanlat"
                    "meanlong" "PM2.5"
                                             "Ozone"
#10
dim(EPAair_rbind_wrangled.wider)
## [1] 14650
                10
#11
write.csv(EPAair_rbind_wrangled.wider, row.names = FALSE,
          file = "./Data/Processed/EPAair 03 PM25 NC1819 Processed.csv")
```

Generate summary tables

- 12. Use the split-apply-combine strategy to generate a summary data frame. Data should be grouped by site, month, and year. Generate the mean AQI values for ozone and PM2.5 for each group. Then, add a pipe to remove instances where mean **ozone** values are not available (use the function **drop_na** in your pipe). It's ok to have missing mean PM2.5 values in this result.
- 13. Call up the dimensions of the summary dataset.

```
#12
EPAair_rbind_wrangled.wider.summaries <-
    EPAair_rbind_wrangled.wider %>%
    group_by(Site.Name, Month, Year) %>%
    drop_na(Ozone) %>%
    summarise(meanAQI = mean(meanAQI))
```

'summarise()' has grouped output by 'Site.Name', 'Month'. You can override
using the '.groups' argument.

```
#13
dim(EPAair_rbind_wrangled.wider.summaries)
```

```
## [1] 239 4
```

14. Why did we use the function drop_na rather than na.omit? Hint: replace drop_na with na.omit in part 12 and observe what happens with the dimensions of the summary date frame.

Answer: When you use "na.omit", you lose many rows of data. It seems that because the data is being grouped by Site.Name/Month/Year, "na.omit" leaves out the entire group when there is any instance (ex. any one site or day within the month) that has no ozone value. "Drop_na" seems to only remove the single row of data in which Ozone has an NA value, as opposed to removing the whole group that it is a part of.
